Stock Maintenance -

Stock maintenance is an interface b/w the customer and sales person. It aims at improving the efficiency in maintaining the stocks.

⊗ The system used by 3 people.
Man at data provider, customer, sales person.

⊗ Data provider is the one who analyses the product and distributes the items.

⊗ The customer is the one who takes order of product.

⊗ Sales is the one who maintains the stock details.

⊗ Overall description

It will describe major part of the system components and interconnection.

→ customer can order for the items.

→ validate customer. The items ordered by the customer are validated.

→ Sales details maintain the stock details after delivering the items to the customer (company).
