

Stock Maintenance.

Stock maintenance is an interface b/w the customer and sales person. It aims at improving the efficiency in maintaining the stock.

The entire process of stock maintenance is done in a manual manner considering the fact that the number of customers for purchase is increasing every year, a maintenance system is essential to meet the demand.

The system used by 3 people.

- ① Maintains data provider, customer, sales person.
- ② The customer & the one who takes order of products.
- ③ Sales person & the one who maintains the stock details.
- ④ Customer who orders for the item.
- ⑤ Validates customer the item ordered by the customer validate.
- ⑥ Sales details maintain the stock details after delivering items to the customer (company).
